# Additional Topic in Grouping

Create Dynamic Grouping using Calculations

Manual visual Grouping that has a downside that the grouping is static.

If we remove the filter the resultant group becomes incorrect as it is static.

In order to make it dynamic we use calculated fields.

Profitable categories | ListOfOrders (P1-AmazingMartEU2) | ✕

```
IF SUM([Profit]) > 10000
THEN 'Above 10k' ELSE 'below 10k' END
```
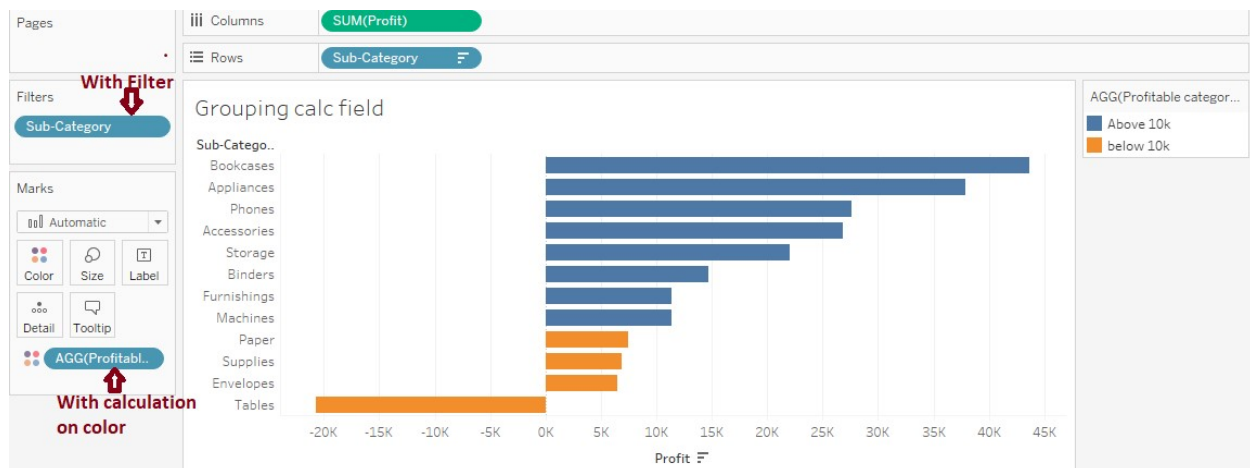

▶

The calculation is valid.   1 Dependency ▼   Apply   OK

Drag the calculated field to color.

Now, if we remove the filter the result is displayed correctly as the group is changing dynamically.
